1 OUTLINE OF PACKAGE

1.1 Preface

The "S1C88409 Development Tool" package is a software development tool package for the CMOS 8-bit single chip microcomputer S1C88 Family, and consists of software tools necessary for debugging by the ICE (S5U1C88000H5) and mask option setting of the S1C88409. The "S1C88 Family Assembler Package" is also necessary for the software development.

Program unused area filling utility **fil88409**
 Function option generator **fog88409**
 Mask data checker **mdc88409**
 Self-diagnostic program **t88409**

1.2 Provided Floppy Disks

This package includes the following floppy disks which are necessary for debugging by the ICE and mask option setting of the IC for the S1C88409 development.

- 1) 3.5" floppy disk (2HD) for IBM-PC/AT 1
- 2) S5U1C88409D Manual (Development Software Tool for S1C88409) (this manual) 1

The type of the personal computer that can be used with the development system and the restrictions are described in "2.1 System Configuration", be sure to read before to use.

Keep the original disk in a safe place as a backup after copying the contents to hard disk or other floppy disk.

Note: Use the DISKCOPY for backup of the original disk.

The contents of the floppy disk and installation procedure of the software development tools are explained in "2.2 Installation".

1.3 Outline of Software Tool

Figure 1.3.1 shows the software development flow.

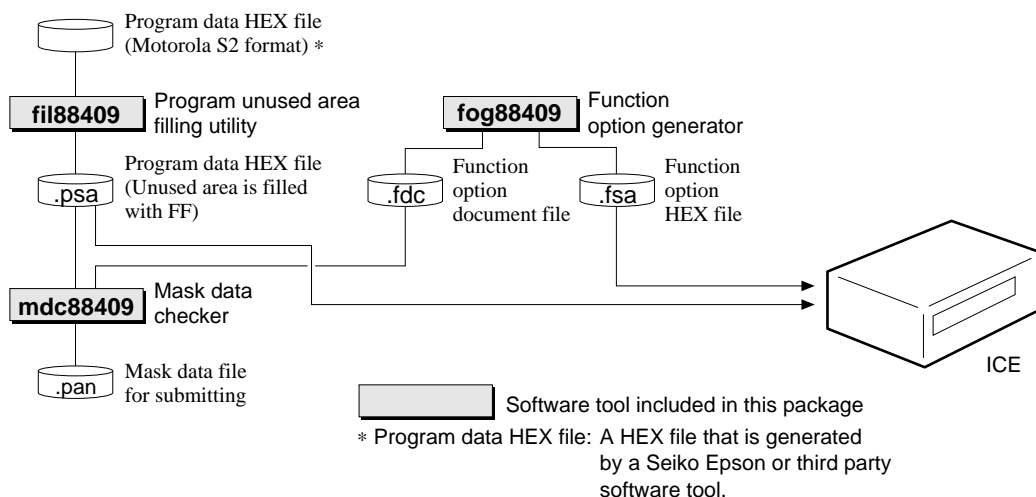

Fig. 1.3.1 Software development flow

Outline of the basic function of each program are as follows.

1.3.1 Program unused area filling utility <fil88409>

The program unused area filling utility fil88409 is a tool for filling the unused area of the S1C88409 built-in ROM with the FF and setting the system code for the system reserved area of the S1C88409 when debugging using the ICE and for submitting mask data to Seiko Epson, for S1C88409 software development.

1.3.2 Function option generator <fog88409>

In the S1C88409, 10 items such as an I/O port function can be selected as mask option. The function option generator fog88409 is a tool that can interactively select the S1C88409 mask option settings and generates the mask option setting file for the ICE and the function option document file for generating the mask pattern.

1.3.3 Mask data checker <mdc88409>

The mask data checker mdc88409 is a tool to check the format of the program data that the unused area of the built-in ROM is filled with FFH and the S1C88409 system code is set and the function option document file for generating mask pattern, and to convert data developed by the customer to the mask data for submitting to Seiko Epson. So the customer's data becomes mask IC exactly.

1.3.4 Self-diagnostic program <t88409>

This package includes the self-diagnostic program to check the ICE and the Peripheral Circuit Board (S5U1C88409P) hardware and the function option data. Perform a self-diagnostic of the ICE and Peripheral Circuit Board periodically using this program when using the ICE and the Peripheral Circuit Board for debugging.

Note: When submitting mask data to Seiko Epson, you should use the mdc88409 and it must include program data in the mask data, even if you use the S1C88409 in the MPU mode that does not need to make a mask for internal ROM; it needs masking only for the mask option (I/O settings, etc.).

2 DEVELOPMENTAL ENVIRONMENT AND INSTALL

Here we will explain the configuration of the program development system and installation procedure for the software tools.

2.1 System Configuration

The system configuration that is necessary for the program development using this package is shown below.

2.1.1 Development using IBM-PC/AT

Model: IBM-PC/AT and the full compatible (*1)
DOS: PC-DOS ver. 3.3 or higher
 MS-DOS ver. 3.3 or higher
RAM capacity:
 640K bytes (*2)
Hard disk drive:
 Free space more than 200K bytes is necessary (*3)
Floppy disk drive:
 3.5 inches, 2HD (1.44M bytes),
 1 drive or more
CRT & graphic board:
 EGA, VGA (text display only, fixed at 80 character × 25 lines)
Printer: For listing (only character printing)
Other software:
 Editor For source file creation/modification

Restrictions:

- *1 Compatible with models that use Intel 80 × 86 system for CPU.
- *2 This system operates in the real mode and does not use EMS and protected memory.
- *3 Assumes to use HD basically.

2.2 Installation

Here we will explain the installing of the programs included in this package. The contents of the floppy disk supplied with this package are shown in Figure 2.2.1.

Keep the original disk in a safe place as a backup after installing.

Note: Use the DISKCOPY for backup of the original disk.

2.2.1 Installer

This package includes the exclusive installer "setup409.exe" to install the software tools on the customer's disk drive. Install the software tools in this package by starting this installer.

Path name to install is fixed at \88409 in the default, but the setting that appending the upper layered path name to \88409 is possible. When installing other software tools of the S1C88 Family, by setting the same upper layered path name like this, file management on the disk will be easy.

Example: When setting to append "EPSON" in the upper layered path name.

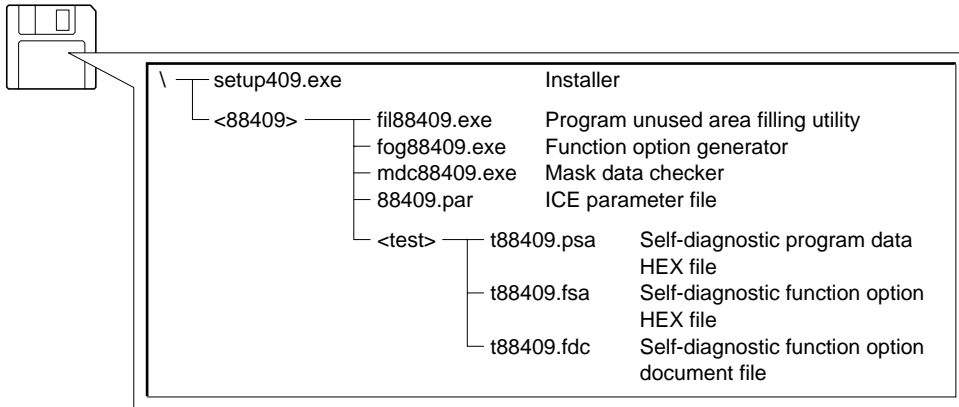

Fig. 2.2.1 Contents of floppy disk

Note: The batch file is installed in the directory ...\\<88409>. Use it after copying to your work directory if necessary.

2.2.2 Installation procedure

The S1C88 Family software tools need capacity approximate 200K bytes including a work area in case of all the program is installed. Therefore, we recommend to use HD (hard disk) basically. The twin-drive FD model can be used. The exclusive installer in this package checks the free space on the disk to be installed. If there is not enough free space on the install destination disk, reserve free space on the disk to perform file deletion and backup.

■ Operation procedure

- (1) Insert the floppy disk in this package into a drive.
- (2) Start the installer.
When starting the installer, be sure to set English mode.

A:setup409

Hereafter, install according to the messages displayed as below.

1. Initial screen

```

E0C88 Family Development Tool Install Utility Ver. X.XX

Copyright(C) SEIKO EPSON CORP. 199x

***** E0C88409 Development Tool *****

Enter install drive from  [ A ]  ← Transfer source drive (original disk)

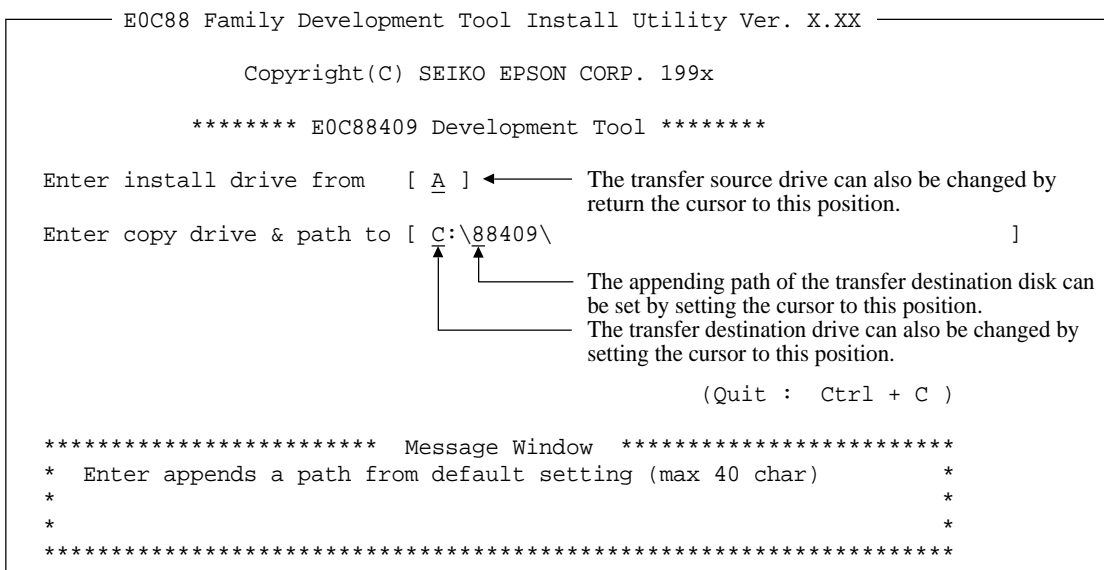

Enter copy drive & path to [ C:\88409\ ]
                               ↑
                               Transfer destination drive
                               and path (default setting)

                               (Quit : Ctrl + C )

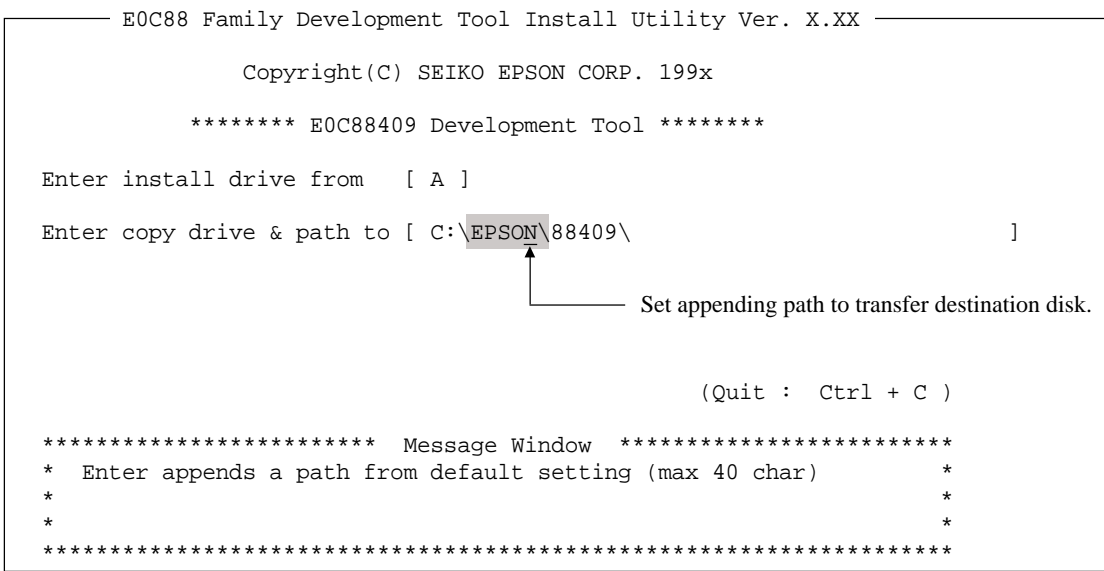

***** Message Window *****
* OK : Enter *
* Caution : Install and copy drive must be set different name *
* * * * *
*****

```

2. Changing transfer destination drive and path

3. Registration of appending path of transfer destination

2 DEVELOPMENTAL ENVIRONMENT AND INSTALL

4. Confirmation of transfer source disk (original) insertion

```
----- E0C88 Family Development Tool Install Utility Ver. X.XX -----

      Copyright(C) SEIKO EPSON CORP. 199x

      ***** E0C88409 Development Tool *****

Install drive from : A:\          ← Confirm setting by Enter key
Copy drive to      : C:\EPSON\88409\ ← Confirm setting by Enter key

                                   Volume name of original disk
                                   ↓
                                   (Quit : Ctrl + C )

***** Message Window *****
* Insert install disk [ 88409_DISK1 ] to specified drive      *
*                                                              *
*                      Press any key to continue_            *
*****
```

After setting the transfer source drive and transfer destination drive by Enter key respectively, the installer waits for confirmation of the transfer source disk (original) insertion.

Installation starts by inputting any key in this status.

The file name to be transferred is displayed in the "Message Window" during installing. When the installation is completed normally, an end message is displayed in the "Message Window".

5. Error

```
----- E0C88 Family Development Tool Install Utility Ver. X.XX -----

      Copyright(C) SEIKO EPSON CORP. 199x

      ***** E0C88409 Development Tool *****

Install drive from : A:\
Copy drive to      : C:\EPSON\88409\

                                   (Quit : Ctrl + C )

***** Message Window *****
* Insufficient disk space ← If an error has occurred during installing, an error *
*                          message is displayed in the "Message Window".      *
*                      Press any key to continue_            *
*****
```

Note: When an error which is not fatal is generated in the installing stage, the installer returns to the initial screen and the operation can be continued. However, when "Quit" or a fatal error is generated, the installer is forcibly terminated. (In this case, delete all the file which are installed incompletely.)

<Messages of installer>

1. Start-up message

E0C88 Family Development Tool Install Utility Ver. X.XX Copyright (C) SEIKO EPSON CORP. 199x

2. Setting, confirmation and operating messages

Message	Explanation
Enter install drive from	Transfer source drive name
Enter copy drive & path to	Transfer destination drive name
Caution : Install and copy drive must be set different name	Transfer source drive name and transfer destination drive name must be set to different names.
Insert install disk [volume name] to specified drive	Insert the transfer source disk [volume name] into the specified drive.
Copy drive and path is [drive and path name]	Transfer destination drive and path is [drive name and path name].
Enter appends a path from default setting (max 40 char)	Input path name appending to the default setting.
Install drive from : [Install drive and path name]	Transfer source drive is [drive name and path name].
Copy drive to : [Copy drive and path name]	Transfer destination drive is [drive name and path name].
Copying [reading file]	Reading transfer source file [file name].
to [writing file]	Writing transfer destination file [file name].
Press any key to continue	Press any key to continue the installer.
Press any key to exit	Press any key to terminate the installer.
E0C88 Family Dev. Tools install utility has been successfully	Installation of the S1C88 Family software tools has been succeeded.
Good-bye from E0C88 Family Dev. Tools install utility	Terminates installation of the S1C88 Family software tools.

3. Error messages

Error message	Explanation
Incorrect DOS Version use DOS 3.X or later	DOS version is incorrect.
Write protect error	Transfer destination disk has been protected from writing.
Unit No. is not exist	There is no unit number.
Drive not ready	The drive is not ready.
Install disk is different	Disk to be installed is different.
Seek error	Seek error has been generated.
Media type is different	Disk is different.
Sector not found	Sector cannot be detected.
Write error	Write error has been generated.
Read error	Read error has been generated.
Other error	Other error has been generated.
Disk error on [drive]	Disk error has been generated on [drive].
Cannot create the path	Path cannot be created.
Setting path already exists enter another drive and path	Since the set path already exists, set another drive and path.
Insufficient disk space	Disk space is insufficient.
Insufficient disk space, insert other disk	Since the disk space is insufficient, insert another disk.
Bad select the install drive	Drive specification for transfer source disk is wrong.
Bad select the copy drive	Drive specification for transfer destination disk is wrong.
Error : [Reading file] Cannot open source file	Transfer source file cannot be read.
Error : [Writing file] Cannot open out file	Transfer destination file cannot be written.
E0C88 Family Dev. Tools install utility has been terminated	Installation of the S1C88 Family software tools has been terminated.
Caution : Delete temporary installed and files	Since the installation of the S1C88 Family software tools has been terminated, delete all the file which are installed incompletely.

3 DETAILED EXPLANATION OF TOOLS

3.1 Program Unused Area Filling Utility (fil88409)

3.1.1 Outline of fil88409

The fil88409 is a tool for filling the unused area of the S1C88409 built-in ROM (000000H–001FFFH) with the FF and setting the system code for the system reserved area of the S1C88409 when debugging using the ICE and for submitting mask data to Seiko Epson, for S1C88409 software development.

It serves to enhance the compatibility between the data debugged by the customer using the ICE and the mask data for submission to Seiko Epson. After downloading an fil88409 output file to the ICE and debugging using the ICE, use the mask data checker (mdc88409) to convert it into mask data for submission to Seiko Epson.

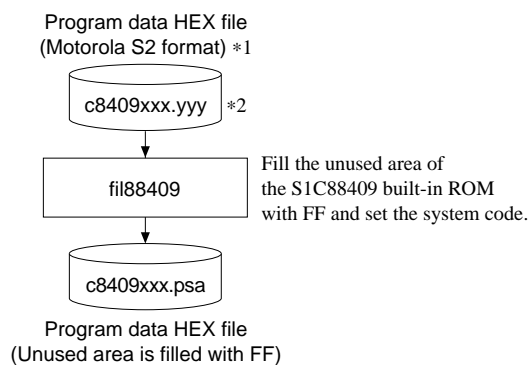

Fig. 3.1.2.1 fil88409 execution flow

*1 A HEX file that is generated by a Seiko Epson or third party software tool.

*2 Since the customer code is entered in the xxx part of the file name, it should be as designated by Seiko Epson.

Replace the yyy with an extension of the HEX file generated by a Seiko Epson or third party software tool.

3.1.2 Execution flow and input/output files

Figure 3.1.2.1 shows the fil88409 execution flow.

(1) Preparation of program data HEX file

Prepare a Hex file (Motorola S2 format) generated by a Seiko Epson or third party software tool.

(2) fil88409 execution

A file (c8409xxx.psa) in the format where the unused area of the S1C88409 built-in ROM has been filled by the FFH, for debugging the above mentioned program data HEX file on the ICE, and of the type (mdc88409) for submission of mask data to Seiko Epson is generated by execution of the program unused area filling utility (fil88409). At this time, the system codes F1H and FFH are also set to the system reserved areas (addresses 000032H and 000033H) of the S1C88409.

Note: Since the customer code is entered in the xxx part of the file name, it should be as designated by Seiko Epson.

3.1.3 Operation procedure

To start fil88409, insert the work disk into the current drive at the DOS command level (state in which a prompt such as A> is displayed) and then enter the command as following format.

```
fil88409 <file> 
```

 indicates the Return key.

■ Input file name (c8409xxx.yyy)

Specify the program data HEX file name to fill the unused area of the built-in ROM.

The fil88409 accepts only Hex files (Motorola S2 format) generated by a Seiko Epson or third party software tool.

When a file for other than the current drive is specified, the path name (drive/directory) must be specified in front of the file name.

Example: A>fil88409 b:\test\c84090a0.sa

■ Start-up message

When fil88409 is started, the following message is displayed.

Example: File name: c84090a0.sa

```
A>fil88409 c84090a0.sa
FIL88409 Unused Area Filling Utility Version X.XX
Copyright (C) SEIKO EPSON CORP. 199x
```

■ End message

When a series of operation are complete, the fil88409 displays the following message and returns to DOS command level.

(1) When terminated normally

```
A>fil88409 c84090a0.sa
FIL88409 Unused Area Filling Utility Version X.XX
Copyright (C) SEIKO EPSON CORP. 199x
.....
Unused Area Filling Completed
System Area Data Set Completed
A>
```

In this case, since the PATH name of the drive/directory will not be set upon start-up, the post conversion program HEX file (c84090a0.psa) with the built-in ROM unused area filled and the S1C88409 system code set is generated in the directory.

The proceeding status is indicated by a period (.) during fil88409 execution.

(2) When an error has been occurred

```
A>fil88409 c84090a0.sa
FIL88409 Unused Area Filling Utility Version X.XX
Copyright (C) SEIKO EPSON CORP. 199x

      C84090A0.SA 5:           File Format Error           ...Example of error message
A>
```

If an error is generated during fil88409 execution, it displays the file name producing the error, the line number and an error message, then terminates the fil88409.

Also, when an error has been generated, a post-conversion program data HEX file (c8409xxx.psa) is not generated. (In the event of a warning message, a post-conversion program data HEX file is generated.)

(3) In the event of forced termination

To forcibly terminate the execution of the fil88409, enter "CTRL" + "C". (This can also be done by pressing the "STOP" key on the host machine you are using.)

3.1.4 Error messages and warning message

fil88409 error messages and warning message are listed below.

Table 3.1.4.1 Error message

Error message	Explanation
Can't Find File	The specified input file does not exist.
Syntax Error: Input File	An input file name has not been specified.
File Format Error	The input file format is wrong. (*1)
Can't Open File	The input file cannot be opened.
Not S Record	The input file is not S record format.
Data Length	The data length of 1 line is too short.
Too Many Data In One Line	The data length of 1 line is too long.
Not 3Byte Address	The address length is not 3 bytes (including S1, S3, S7 and S9 record).
Check Sum Error	The check sum does not match.
Duplicate Error	There is a duplicate definition of data in the same address.
Can't Use Vector 32H System Reserve	The physical addresses 000032H and 000033H cannot be used as a vector because they are reserved as a system area for the S1C88409.
Can't Use Vector 33H System Reserve	
Insufficient disk space	There is no disk space.
Write Error	An error has occurred while writing data.

*1 A file format error will occur under the following conditions:

- Another record has followed the S8 record.
- Something other than a hexadecimal number is included in the file.
- There is a line that consists of less than 12 characters.
- There is an S8 record that has more or less than 12 characters or of which the byte count is not 04.
- There is an S4, S5 or S6 record included in the file.
- There is no S8 record.

Table 3.1.4.2 Warning message

Warning message	Explanation
Warning: No 00H Address	There is no data in the physical address 000000H.

Note: When there is no data in the physical address 000000H, it will output a warning message and filled the data FFH.

3.1.5 fil88409 execution example

■ Input file example (c84090a0.sa)

```

3.2 Function Option Generator (fog88409)

3.2.1 Outline of fog88409

With the 8-bit single chip S1C88409 microcomputer, the customer may select 10 mask options. By modifying the mask patterns of the S1C88409 according to the options selected by the customer, the system can be customized to meet the specifications of the target system.

The fog88409 function option generator is a software tool for generating the document file used to generate mask patterns. It lets the customer interactively select the mask option for the S1C88409. From the data file created with fog88409, the S1C88409 mask pattern is automatically generated by a CAD machine at Seiko Epson. In addition, HEX data in the Motorola S2 format necessary for debugging using the ICE can be created. By downloading this data file from the host machine when debugging with the ICE, the same option functions as the actual IC can be executed on the ICE.

3.2.2 Execution flow and input/output files

Figure 3.2.2.1 shows the fog88409 execution flow.

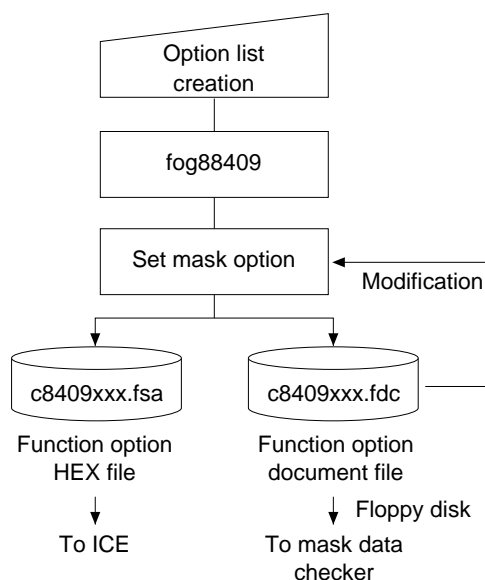

Fig. 3.2.2.1 fog88409 execution flow

(1) Option list creation

Select the S1C88409 mask options that meet the specifications of the customer's target system and record them in the option list (paper for recording items in preparation for input operation; explained later). At this time, decide the option for the ICE use.

(2) fog88409 execution

Start fog88409 and select the mask options for the S1C88409 according to the display on screen. Since options can be selected using the interactive format, a device such as a source file is not necessary when creating data.

In addition, when correcting the contents, once it has been set, the necessary points alone can be corrected by inputting the document file that was output by fog88409.

As a result, fog88409 generates the following two files by option settings.

- **Function option document file (c8409xxx.fdc)**

This is a document file in which the selected mask option items for the S1C88409 have been recorded, used to generate mask patterns at Seiko Epson. You can correct part of this file by inputting it using the fog88409.

This file must be run through the mdc88409 mask data checker with the completed program file, and be submitted to Seiko Epson.

- **Function option HEX file (c8409xxx.fsa)**

This is a data file for setting the S1C88409 mask options when debugging by the ICE. This file is generated by a Motorola S2 type format. When debugging is done using the ICE, download this file into the ICE by the command.

Remarks

- * Since the customer code is entered in the xxx part of the file name, it should be as designated by Seiko Epson.
- * Copy the document file and the program file (c8409xxx.psa) in a batch to another floppy disk and submit it to Seiko Epson.
- * Refer to the ICE help file for the method of downloading the mask options into the ICE.

3.2.3 Option list

The following options can be set for the S1C88409 and ICE.

Multiple specifications are available in each option item as indicated in the Option List. Using "3.2.7 Option selection and option specification" as reference, select the specifications that meet the target system and check the appropriate box. Be sure to record the specifications for unused functions too, according to the instructions provided.

The option selection is done interactively on the screen during fog88409 execution, using this option list as reference.

S1C88409 mask option list

1 OSC1 SYSTEM CLOCK

3.2.4 Starting procedure

■ Starting command

```
fog88409 
```

 indicates the Return key.

To start fog88409, insert the work disk into the current drive at the DOS command level (state in which a prompt such as A> is displayed), then enter the program name.

■ Start-up message

```
A>fog88409
EOC88409 Function Option Generator Version X.XX
Copyright (C) SEIKO EPSON CORP. 199x

THIS SOFTWARE MAKES THE FOLLOWING FILES

      C8409XXX.FSA . . . FUNCTION OPTION HEX FILE.
      C8409XXX.FDC . . . FUNCTION OPTION DOCUMENT FILE.
```

When fog88409 is started, the start-up message is displayed.

Here we will explain the actual operation method of fog88409 according to the screen displayed.

To suspend execution, press the "CTRL" and "C" keys together; the sequence returns to the DOS command level. (It is possible by pressing "STOP" key depending on the PC used.)

■ Date input

```
CURRENT DATE IS 'xx/xx/xx
PLEASE INPUT NEW DATE : 
```

Following the start-up message, the date currently set in the host computer is displayed, prompting entry of a new date. When modifying the date, enter the 2-digit year, month, and day of the month by delimiting them with a slash ("/"). When not modifying the date, press the Return key to continue.

■ Operation selection menu

```
*** OPERATION SELECT MENU ***

      1. INPUT NEW FILE
      2. EDIT FILE
      3. RETURN TO DOS

PLEASE SELECT NO. ?
```

When the date is set, the operation selection menu is displayed on the screen. Enter a number from 1 to 3 to select a subsequent operation.

The items indicate the following.

1. **INPUT NEW FILE:**
Used to set new function option file.
2. **EDIT FILE:**
Used to read the already-generated function option document file and set or modify the option contents. In this case, the current drive must contain the function option document file (c8409xxx.fdc) generated by "1. INPUT NEW FILE".
3. **RETURN TO DOS:**
Used to terminate fog88409 and return to the DOS command level.

3.2.5 Setting new function options (INPUT NEW FILE)

This section explains how to set new function option file.

* In the examples, ☐ indicates the Return key.

```

*** OPERATION SELECT MENU ***

      1. INPUT NEW FILE
      2. EDIT FILE
      3. RETURN TO DOS

PLEASE SELECT NO.? 1 ☐ .. (1)

PLEASE INPUT FILE NAME ? c8409xxx ☐ .. (2)
PLEASE INPUT USER'S NAME ? SEIKO EPSON CORP. ☐ .. (3)
PLEASE INPUT ANY COMMENT
(ONE LINE IS 50 CHR) ? TOKYO DESIGN CENTER ☐ .. (4)
                     ? 421-8 HINO HINO-SHI TOKYO 191-8501 JAPAN ☐
                     ? ☐

```

(1) PLEASE SELECT NO.?

Select "1. INPUT NEW FILE" on the operation selection menu.

(2) PLEASE INPUT FILE NAME?

Enter the function option document (and HEX) file name to be generated. Do not enter the extension of the file name. A small letter is converted to a capital letter and outputs to the document file. Alphabetic characters and "0" to "9" can be used.

In case a function option document file with the same name as the file name specified in the current drive exists, the user is asked whether overwritten is desired. Enter "Y" or "N" accordingly.

```

PLEASE INPUT FILE NAME? c8409xxx ☐
EXISTS OVERWRITE(Y/N)?

```

(3) PLEASE INPUT USER'S NAME?

Enter the customer's company name. Up to 40 characters may be entered. If 41 or more characters are entered, they are ignored. "[" and "]" is displayed by conversion to "(" and ")".

(4) PLEASE INPUT ANY COMMENT

Enter any comment. Up to 50 characters may be entered in one line. If 51 or more characters are entered in one line, they are ignored. Up to 10 comment lines may be entered. To end entry of comments, press the Return key.

A small letter is displayed by conversion to a capital letter.

Include the following in comment lines:

- Company, department, division, and section names
- Company address, phone number, and FAX number
- Other information, including technical information

The below symbols for the inputting of (3) and (4) cannot be used. When those symbols are input, it displays an "ILLEGAL CHARACTER" error message, then again returns to the input status for that line.

"\$", "\"("¥)", "|", back-quote ... input disable

Next, start mask option setting for S1C88409. For new settings, select options OPTION No. 1 to No. 10 sequentially and interactively.

See "3.2.7 Option selection and option specification" for the selection procedure of each function option.

3.2.6 Modifying function option settings (EDIT FILE)

This section explains how to modify the settings in the function option file.

* In the examples, ☐ indicates the Return key.

```

*** OPERATION SELECT MENU ***

      1. INPUT NEW FILE
      2. EDIT FILE
      3. RETURN TO DOS

PLEASE SELECT NO.? 2 ☐ .. (1)

*** SOURCE FILE(S) ***

C84090A0          C84090B0          C84090C0          .. (2)

PLEASE INPUT FILE NAME ? c84090a0 ☐ .. (3)
PLEASE INPUT USER'S NAME ? ☐ .. (4)
PLEASE INPUT ANY COMMENT
(ONE LINE IS 50 CHR) ? ☐ .. (5)
PLEASE INPUT EDIT NO. ? 4 ☐ .. (6)

```

(1) PLEASE SELECT NO.?

Select "2. EDIT FILE" on the operation selection menu.

(2) *** SOURCE FILE(S) ***

Will display the function option document files on the current drive.

If no modifiable source exists, the following message is displayed and the program is terminated.

```

FUNCTION OPTION DOCUMENT ...
... FILE IS NOT FOUND.

```

(3) PLEASE INPUT FILE NAME?

Enter a file name. Do not enter the extension of the file name. If the function option document file (c8409xxx.fdc) is not in the current drive, an error message like the one below is output, prompting entry of other file name.

```

PLEASE INPUT FILE NAME? c84090n0 ☐
FUNCTION OPTION DOCUMENT ...
... FILE IS NOT FOUND.

```

(4) PLEASE INPUT USER'S NAME?

When modifying the customer's company name, enter a new name. The previously entered name may be used by pressing the Return key.

(5) PLEASE INPUT ANY COMMENT

When modifying a comment, enter all the comment lines anew, beginning with the first line; comment data cannot be partially modified. Previously entered comment data can be used by pressing the Return key. The input conditions are the same as for new settings.

(6) PLEASE INPUT EDIT NO.?

Enter the number (1–10) of the option to be modified, then start setting the option contents (See "3.2.7 Option selection and option specification").

When selection of one option is complete, the system prompts entry of another function option number. Repeat selection until all options to be modified are selected. If the Return key is pressed without entering a number, the option of the subsequent number can be selected.

Enter "E☐" to end option setting. Then, move to the confirmation procedure for the function option HEX file generation (See "3.2.8 HEX file generation").

Example:

- When modifying the settings of the option of No. 9
PLEASE INPUT EDIT NO.? 9 ☐
- When ending setting
PLEASE INPUT EDIT NO.? E ☐

3.2.7 Option selection and option specification

Selection procedure for function options are described below.

- * Option selection is done interactively. For new settings (INPUT NEW FILE), set all options OPTION No. 1 to No. 10 sequentially; to modify settings (EDIT FILE), the specified option number may be set directly.
- * The selections for each option correspond one to one to the option list. While referring to the contents recorded in the option list, enter the selection number.
- * In the message that prompts entry, the value in parentheses () indicates the default value in case of new settings, or the previously set value in case of setting modification. This value is set when only the Return key is pressed.
- * In the selection examples, "□" indicates the Return key input.

• Example of option selection

```
*** OPTION NO.3 ***
--- MULTIPLE KEY ENTRY RESET ---

1. NOT USE
2. USE K00,K01
3. USE K00,K01,K02
4. USE K00,K01,K02,K03

PLEASE SELECT NO.(1) ? 2□

2. USE K00,K01                SELECTED
```

- **Modifying procedure when wrong number is selected in new setting (INPUT NEW FILE)**
When you wish to modify previously set option in the new setting process (INPUT NEW FILE), enter "B□" to return 1 step back to the previous function option setting operation.

```
*** OPTION NO.3 ***
--- MULTIPLE KEY ENTRY RESET ---

1. NOT USE
2. USE K00,K01
3. USE K00,K01,K02
4. USE K00,K01,K02,K03

3.2.8 HEX file generation

When function options setting is completed, the following message is output to ask the operator whether to generate the function option HEX file.

```
END OF OPTION SETTING.
DO YOU MAKE HEX FILE (Y/N) ? Y
```

DO YOU MAKE HEX FILE (Y/N) ?

Enter "Y" to generate the HEX file (c8409xxx.fsa). If "N" is entered, no HEX file is generated and only document file (c8409xxx.fdc) is generated. Since the function option HEX file (c8409xxx.fsa) is needed when debugging the program with the ICE, normally set "Y".

When debugging with the ICE, download the generated HEX file into the ICE.

When the above operation is completed, fog88409 generates the function option HEX file and function option document file. And then the following message is output and the sequence returns to the operation selection menu. However, when "N" is input in the above selection for the function option HEX file, the end message shown below is not displayed.

```
MAKING FILE(S) IS COMPLETED.
```

3.2.9 End procedure

```
*** OPERATION SELECT MENU ***

1. INPUT NEW FILE
2. EDIT FILE
3. RETURN TO DOS

PLEASE SELECT NO.? 3
```

When a series of operations are complete, the sequence returns to the operation selection menu. Execution of fog88409 can be ended by selecting "3. RETURN TO DOS" on this menu. If "1. INPUT NEW FILE" or "2. EDIT FILE" is selected, setting function options can be performed again.

fog88409 can be forcibly terminated by pressing the "CTRL" and "C" keys together during program execution. (It is possible by pressing "STOP" key depending on the PC used.) However, in this case, the correct function option HEX file and function option document file are not generated.

3.2.10 Error message

Here following is a list of the fog88409 error messages.

Table 3.2.10.1 fog88409 error message list

Error message	Explanation
ILLEGAL CHARACTER!!	There is an input character error. An input disable character has been input.
FUNCTION OPTION DOCUMENT FILE IS NOT FOUND.	There is no document file at the time of the setting modification (EDIT FILE). There is no document file with the input file name at the time of the setting modification (EDIT FILE).
FILE NAME ERROR	9 characters or more have been input for the file name input.
BAD FUNCTION OPTION DOCUMENT FILE. - file name -	A function option document file other than for the S1C88409 is specified during modification (EDIT FILE).

```

3.3 Mask Data Checker (mdc88409)

3.3.1 Outline of mdc88409

The mdc88409 mask data checker is a software tool that checks the format of the program data (c8409xxx.psa) that the unused area of the built-in ROM is filled with FFH by fil88409 and option data (c8409xxx.fdc) created by the user and creates the data file (c8409xxx.pan) for generating mask patterns. The user must send the file generated through this software tool to Seiko Epson. Moreover, mdc88409 has the capability to restore the generated data file (c8409xxx.pan) to the original file format (c8409xxx.usa and c8409xxx.ufd).

Fig. 3.3.2.1 mdc88409 execution flow

3.3.2 Execution flow and input/output files

Figure 3.3.2.1 shows the mdc88409 execution flow.

(1) Preparation of program data file (c8409xxx.psa)

Prepare the program data HEX file generated from the program unused area filling utility (fil88409).

(2) Preparation of function option data file (c8409xxx.fdc)

Prepare the function option data file generated from the function option generator (fog88409).

(3) Packing of data

Using the mask data checker (mdc88409), compile the program data HEX file and function option document file in one data file for masking (c8409xxx.pan). This file must be sent to Seiko Epson.

(4) Unpacking of data

The data file for masking (c8409xxx.pan) generated by packing processing can be restored to the original program data HEX file and function option document file using the mask data checker (mdc88409).

Note: Since the customer code is entered in the xxx part of the file name, it should be as designated by Seiko Epson.

NOTE: Program data HEX file to be packed/unpacked

mdc88409 executes the following processing for the program data file generated by the user.

Since the built-in ROM capacity of the S1C88409 is 8K bytes (000000H–001FFFH), the packing/unpacking processing by the mdc88409 is done for only the 8K bytes area from the top of program data that can be masked into ROM.

When packing, the mdc88409 extracts the part (8K bytes) to be masked into the S1C88409 built-in ROM and generates the pack data for generating the mask. When restoring the program data by unpacking, only 8K bytes of program data generated as the pack data is restored. Be careful: the program data exceeding 8K bytes becomes invalid in the mdc88409 if the program data created by the user exceeds 8K bytes.

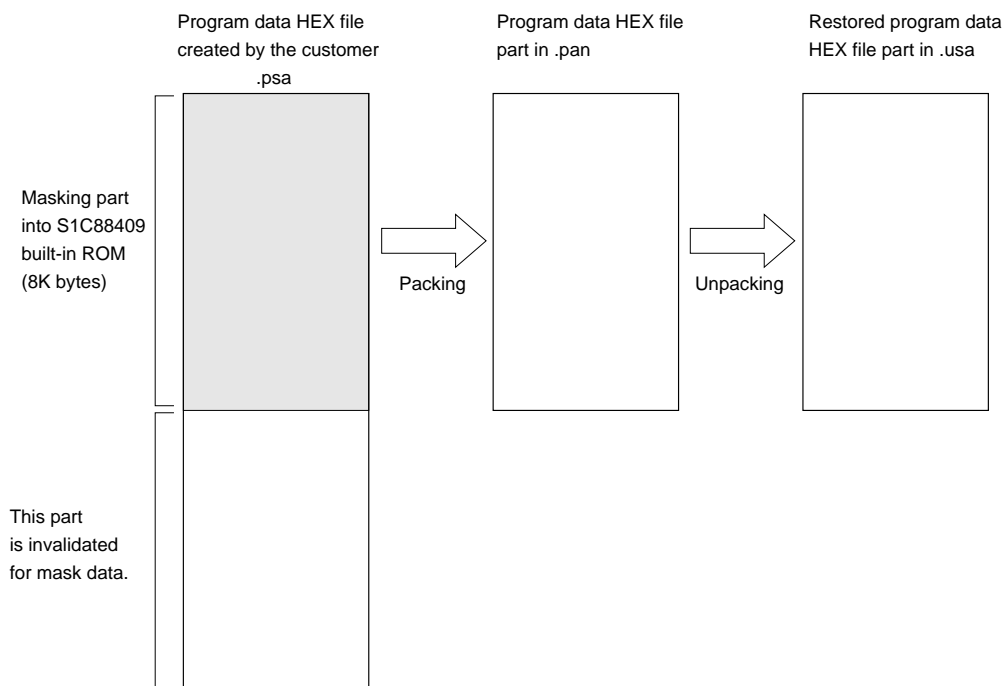

Fig. 3.3.2.2 Program data HEX file to be packed/unpacked

When submitting mask data to Seiko Epson, you should use the mdc88409 and it must include program data in the mask data, even if you use the S1C88409 in the MPU mode that does not need to make a mask for internal ROM; it needs masking only for the mask option (I/O settings, etc.).

3.3.3 Creating work disk

In order to prevent accidents due to misoperations such as program erasures, place a write protection tab on the mask data checker system disk and keep it as master disk; actual operation should be conducted on other disks.

Create a work disk and copy "mdc88409.exe" on it.

3.3.4 Copying data files

When submitting data to Seiko Epson, copy on the work disk the data generated from the program unused area filling utility (fil88409) and the function option generator (fog88409).

Be sure to assign the following file names. (Since the customer code is entered in the xxx part of the file name, it should be as designated by Seiko Epson.)

- Program data c8409xxx.psa
- Function option data c8409xxx.fdc

3.3.5 Starting procedure

To start mdc88409, insert the work disk into the current drive at the DOS command level (state in which a prompt such as A> is displayed) and then enter the command as following format.

■ Start-up command

```
mdc88409 -[p u] <file> 
```

 indicates the Return key.

■ Option

The below options have been set for the start-up command of the mdc88409.

1) -p

Specification of packing. When this option has been specified, the output file name must also be specified. In this case, the program data HEX file (.psa) and function option document file (.fdc) must have the same name (excluding the extension) as the specified output file name. Furthermore, generation of the output file and reading of the input files are done only for the current drive.

Example: A>mdc88409 -p c84090a0.pa0 

2) -u

Specification of unpacking. When this option has been specified, an input file name must also be specified.

Furthermore, reading of the input file and generation of the output files are done only for the current drive.

Example: A>mdc88409 -u c84090a0.pa0 

3) Default (When option has not been specified)

When an option has not been specified, it is designed such that pack/unpack processing can be selected from the operation menu displayed, following start-up. It is set-up such that the packing file name to be output or input can also be specified according to the message displayed.

■ Start-up message

When mdc88409 is started, the following message is displayed.

Display 1

Example: When option has not been specified.

```
A>mdc88409
E0C88409 Mask Data Checker Version X.XX
Copyright (C) SEIKO EPSON CORP. 199x
```

```
--- OPERATION MENU ---
```

1. PACK
2. UNPACK

```
PLEASE SELECT NO.?
```

When an option has not been specified at the time the start-up command is input, the operation menu is displayed and the user is prompted to select operation. When creating masking data for submission to Seiko Epson, select "1"; when the masking data is to be split and restored to the original format (c8409xxx.psa and c8409xxx.fdc), select "2". When an option has been specified at the time of start-up of the mdc88409, it executes directly the selected packing or unpacking processing without displaying this operation menu.

Note: In OS environment setup file "CONFIG.SYS", the number of files that can be opened at the same time must be set at least 10.

Example: FILES = 20

3.3.6 Packing of data

When generating data for submission to Seiko Epson, specify -p option at the time of start-up of the mdc88409 (see "1" in "3.3.5 Starting procedure") or select "1. PACK" in the operation menu (see "3") in "3.3.5 Starting procedure").

When "1. PACK" is selected in the operation menu, the user is prompted for the name of the file to be generated. (See Display 2.)

Since the customer code is entered in the xxx part of the file name, it should be as designated by Seiko Epson.

Moreover, after submitting the masking data to Seiko Epson and there is need to re-submit the masking data for reasons such as faulty programs, etc., increase the numeric value of "n" by one when the input is made. (Example: When re-submitting data after "c8409xxx.pa0" has been submitted, the pack file name should be entered as "c8409xxx.pa1".)

In addition, access to the input files when packing data is done only for program data HEX file (.psa) and function option document file (.fdc) that have the same name (excluding the extension) as the specified output file name on the current drive.

When the -p option has been specified at mdc88409 start-up, it executes directly the packing processing without displaying the operation menu and confirmation message of the file name to be generated.

If there is no problem in inputting of the file name and the content of the input file, it generates the packed data for masking and displays the generated file name. (See Display 3.)

With this, the data file for masking (c8409xxx.pan) is generated. Submit this file to Seiko Epson.

Display 2

```
C8409XXX.PSA -----+
                        +----- C8409XXX.PA0 (PACK FILE)
C8409XXX.FDC -----+

PLEASE INPUT PACK FILE NAME (C8409XXX.PAn) ? c84090a0.pa0 
```

Display 3

Example: In case of the output file name is "c84090a0.psa".

```
C84090A0.PSA -----+
                        +----- C84090A0.PA0
C84090A0.FDC -----+
```

3.3.7 Unpacking data

When restoring the packed data to original file format, specify -u option at the time of start-up of the mdc88409 (see "2)" in "3.3.5 Starting procedure") or select "2. UNPACK" in the operation menu (see "3)" in "3.3.5 Starting procedure").

When "2. UNPACK" is selected in the operation menu, the user is prompted for the input file name. (See Display 4.)

When the -u option has been specified at mdc88409 start-up, it executes directly the unpacking processing without displaying the operation menu and confirmation message of the input file name (packed data) to be input.

If there is no problem in the file name and the content of the input file, it executes the unpacking processing and displays the generated file name. (See Display 5.)

With this, the data file for masking (c8409xxx.pan) is restored to the original file format, making it possible to make comparison with the original data. The restored data file names will be as follows:

- *Program data* c8409xxx.usa
- *Function option data* c8409xxx.ufd

Display 4

```
PLEASE INPUT PACKED FILE NAME (C8409XXX.PAn) ? c84090a0.pa0
```

Display 5

Example: In case of the input file name is "c84090a0.pa0"

```

+----- C84090A0.USA
C84090A0.PA0 -----+
+----- C84090A0.UFD
```

3.3.8 End procedure

When a series of operations are complete, the mdc88409 displays the following message and returns to the DOS command level.

When terminated normally

Display 6

```
PACK/UNPACK COMPLETED
A>
```

The output file is generated in the same directory as the input file.

When an error has been occurred

Display 7

```
HEX DATA ERROR : NOT S RECORD ...Example of error message
A>
```

When an error has occurred, an output file is not generated.

3.3.9 Error message

In the packing operation, program data HEX file and function option data file are checked; in the unpacking operation, the packed file is checked. If there is any abnormal format, the message below is displayed. The mdc88409 error message lists are indicated below.

Table 3.3.9.1 Program data error message list

Message	Explanation
MESSAGE : SEPARATED DATA WITH 8K AS MASK DATA	When data in ".psa" exceeds 8K bytes (built-in ROM capacity of the S1C88409), it packs the 0000H to 1FFFFH data as mask data.

Error message	Explanation
HEX DATA ERROR : NOT S RECORD.	There is no S record.
HEX DATA ERROR : DATA LENGTH.(NOT 24H)	The data length of 1 line is not 24H.
HEX DATA ERROR : ADDRESS.	The address length is not 3 bytes.
HEX DATA ERROR : TOO MANY DATA IN ONE LINE.	There are too many data in 1 line.
HEX DATA ERROR : CHECK SUM.	The checksum is not correct.
HEX DATA ERROR : DUPLICATE.	There is duplicate definition of data in the same address.
HEX DATA ERROR : NO 00H ADDRESS	There is no data in the physical address 00H.
HEX DATA ERROR : NO FILLED FILE WITH FFH	The data of the unused area are not FFH.

Table 3.3.9.2 Function option data error message list

Error message	Explanation
OPTION DATA ERROR : START MARK.	The start mark is not "\OPTION". (during unpacking) *
OPTION DATA ERROR : OPTION NUMBER.	The option number is not correct.
OPTION DATA ERROR : SELECT NUMBER.	The option selection number is not correct.
OPTION DATA ERROR : END MARK.	The end mark is not "\\END" (packing) or "\\END" (unpacking). *

Table 3.3.9.3 File error message list

Error message	Explanation
<file name> FILE IS NOT FOUND.	The file is not found or the file number set in CONFIG.SYS is less.
PACK FILE NAME (file name) ERROR.	The packed input format for the file name is wrong.
PACKED FILE NAME (file name) ERROR.	The unpacked input format for the file name is wrong.

Table 3.3.9.4 System error message list

Error message	Explanation
Directory Full	The directory is full.
Disk Write Error	Writing on the disk is failed.

* \ sometimes appears as ¥, depending on the personal computer being used.

3.3.10 Packed file

■ Configuration of packed file

The packed file is configured according to the following format:

```

*
*   E0C88409 MASK DATA VER X.XX

```

■ Program data

(1) Data line

The program data is configured as follows, using Motorola S2 format:

S2	Count	Address (3 bytes)	Data 0 •• Data 31	Checksum

(2) End mark

S804000000FB

3.4 Self-diagnostic Program (t88409)

3.4.1 Outline of t88409

t88409 is a self-diagnostic program to check the operation of the hardware tool ICE that is used for program debugging of the S1C88 Family. Perform a self-diagnostic of the ICE and Peripheral Circuit Board periodically using this program when using the ICE and the Peripheral Circuit Board for debugging.

3.4.2 File configuration

(1) Program data HEX file (t88409.psa)

This is the main unit of the self-diagnostic program generated by the fil88409 and in which FFH is filled in the unused area of the internal ROM and the system code is set to the system reserved area of the S1C88409.

(2) Function option HEX file (t88409.fsa)

This is the file generated by the fog88409 to set the mask option into the ICE and the Peripheral Circuit Board, and is used at self-diagnosis.

(3) Function option document file (t88409.fdc)

This is the document file generated by the fog88409 and the setting contents of the function option HEX file mentioned above are described.

3.4.3 Operation procedure

After installing the Peripheral Circuit Board into the ICE, self-diagnosis of the ICE and the Peripheral Circuit Board can be done by the following operating test.

For the following operating test, the self-diagnostic program (t88409.psa) and the function option HEX data (t88409.fsa) in this package are used. Perform the below operations with the ICE.

■ Operation Check on ICE

Execute by reading the self-diagnostic program (t88409.psa) and the function option HEX data (t88409.fsa) into the ICE.

Please refer the ICE help file for loading, execution.

Diagnostic procedure

Check using the DONE, OSCC, LCDON, VD1C0-1, SVDON, HVLD, TPC, PDC, DAON and IVREF LEDs on the Peripheral Circuit Board. If the below light statuses are verified following system reset, it is normal. The cycle count indicates a 1 second interval and the light status of the below LED changes every second. When it returns to 1 after 10, it then repeats the cycle again.

Cycle count	1	2	3	4	5	6	7	8	9	10	1	2	3
DONE	●	●	●	●	●	●	●	●	●	●	●	●	●
OSCC	○	○	○	○	○	○	○	○	○	●	○	○	○
LCDON	○	○	○	○	○	○	○	○	●	●	○	○	○
VD1C0	○	○	○	○	○	○	○	●	●	●	○	○	○
VD1C1	○	○	○	○	○	○	●	●	●	●	○	○	○
SVDON	○	○	○	○	○	●	●	●	●	●	○	○	○
HVLD	○	○	○	○	●	●	●	●	●	●	○	○	○
TPC	○	○	○	●	●	●	●	●	●	●	○	○	○
PDC	○	○	●	○	○	○	○	○	○	○	○	○	●
DAON	○	●	●	●	●	●	●	●	●	●	○	●	●
IVREF	○	○	○	○	○	○	○	○	○	○	○	○	○

●: ON (lit)
○: OFF (not lit)

4 88409.par FILE

The 88409.par file is a macro file that contains the information for the S1C88409. The ICE sets its operating environment by loading this parameter file. Therefore, the ICE cannot start up if this parameter file does not exist.

4.1 Contents of 88409.par File

The supplied 88409.par file contains the following information.

```
[Options]
Prcclocksel=0          ... (1)
Vdddown=0              ... (2)
CC=0                   ... (3)
DIAG=0                 ... (4)

```

4.2 Description of the Parameters

The parameters (1) to (4) are fixed items, so do not modify their settings. Parameter (5) and the following parameters are used to set the memory allocations and memory conditions.

General format:

Map<Serial number>
= <Start address> <End address> <Switch>

■ Serial number

The Map parameter must have a serial number within the range from 0 to 1023.

The serial numbers must not be specified in a special order.

If a number is duplicated, the parameter set first is enabled and the others are disabled.

■ Address settings

Addresses can be set in byte units for the range from 000000 to 00FFFF. Areas exceeding 010000 should be done using 265 byte units. (****00-****FF).

■ Switch

The following five letters are available for specifying <Switch>: E, I, U, S and W.

- *Switches for allocating memories (E, I, U switches)*
The I switch allocates the specified address area to the memory on the Peripheral Circuit Board.
The E switch allocates the specified area to the emulation memory on the ICE.
The U switch allocates the specified area to the user's memory on the target board.
- *Switch for setting a stack area (S switch)*
The S switch sets the specified area as a stack area.
- *Switch for disabling writing in certain areas*
The W switch sets the specified area as a ROM area that cannot be written on. When an area is specified without the W switch, the ICE will regard it as a RAM area.

■ Comments

The ICE identifies a line that begins with a semicolon (;) as a comment line. Comments cannot be placed following parameters (e.g.,

Map0=000000 001FFF E W ;internal ROM).

4.3 Emulation Memory

The ICE (S5U1C88000H5) has built-in a 64KB emulation memory for the memory space from 000000 to 00FFFF and a 512KB emulation memory that can be used as an expanded memory area exceeding address 010000. The emulation memory allows the user to use it as a memory that will be connected externally in the actual product. Thus it is not necessary to mount the external memory on the target board to develop the program. However, prepare the external memory on the target board when developing a product that needs a larger memory than 512KB at a location exceeding address 010000.

■ Notes

- ICE88UR for Windows gets the path information for loading the parameter file from the ICE88UR.INI file.
Installation of ICE for Windows makes the DEFAULT.PAR file in the same directory as the ICE88UR.EXE file installed and sets the path information in the ICE88UR.INI file so that the debugger will refer to the DEFAULT.PAR file. It is therefore necessary to edit the path description in the \WINDOWS\ICE88UR.INI file. When the 88409.par file exists in the directory the same as the ICE88UR.EXE file, only the file name part should be modified.
- The parameters (1) to (4) must be described in the part that begins with an [Options] line and the parameters following (5) must be described after the [MAP Config] line. Do not delete [Options] and [MAP Config].
